

## Agreements for the publication of instrument drivers

between

---

hereinafter referred to as "*Organization*"

and

SweepMe! GmbH, Bienertstraße 18, 01187 Dresden, Germany

hereinafter referred to as "*SweepMe! GmbH*".

### 1. Publication of instrument drivers

Instrument drivers are files that are used in the "SweepMe!" software to include measuring instruments and devices. Instrument drivers represent computer programs, which are referred to here as "code".

In order to publish instrument drivers developed by the *Organization* or its employees via the server of *SweepMe! GmbH*, the following points are agreed upon:

- The *Organization* is not obliged to make independently developed instrument drivers available to *SweepMe! GmbH*, but may do so free of charge in order to support the further development of the "SweepMe!" software and to benefit from further developments of the instrument drivers itself.
- If the *Organization* provides the code of an instrument driver to *SweepMe! GmbH*, *SweepMe! GmbH* may redistribute/publish the code under a license of its own choice as licensor (e.g. via the website of *SweepMe! GmbH* or the version manager). The *Organization* is not named as licensor.
- The *Organization* decides whether and in which wording the name of the *Organization* or its employees shall be mentioned in the publication by *SweepMe! GmbH*. For this purpose, the *Organization* shall transmit a text to *SweepMe! GmbH* upon transfer of the equipment class, if applicable.
- If the publication of the transferred instrument driver by *SweepMe! GmbH* results in damage to third parties or other claims by third parties, *SweepMe! GmbH* shall be liable for this and *SweepMe! GmbH* shall not assert any liability claims or other claims against *Organization*.
- The *Organization* retains the right to use the code itself, to develop it further and to distribute or license it non-exclusively under its own conditions. In this case, however, the liability remains with the *Organization*.

- If the transferred instrument driver is used and published by *SweepMe! GmbH* for further development, *Organization* may use this instrument driver free of charge and develop it further itself.
